## SCIENCE: GROWING UP

## YEAR TWO

### KEY KNOWLEDGE:

QUESTION 1: What do babies need?

#### ANSWER

- Babies need adults that they can learn to know and trust.
- Parents (and children) form a deep, affectionate bond with newborns.
- Babies need a lot of special attention, affection, and care.
- Babies tell us how they feel and what they need by crying (or making faces, babbling, etc.).
- Babies need to be breast- or bottle-fed a lot.
- Babies need to have their nappies changed when necessary.
- Babies need people to talk with them so they can learn to speak.
- Parents need to wash their hands and keep things clean when caring for a baby.

QUESTION 2: How do we change throughout our lives?

#### ANSWER

There are 6 stages in the human life cycle:

<p><b>1. Foetus</b> At this time, a baby is growing inside it's mum's womb.</p>		<p><b>2. Baby</b> A baby is born after spending 9 months inside the womb.</p>	
<p><b>3. Childhood</b> At this stage, you learn to walk and talk.</p>		<p><b>4. Adolescence</b> Children become teenagers.</p>	
<p><b>5. Adulthood</b> Your body is fully developed.</p>		<p><b>6. Old age / elderly</b> The last stage in the life cycle of a human.</p>
